

## Hack-A-Thon

### Overview of Project:

You are developing a “Shark Tank” presentation in order to sell your telehealth device for use with the case below.

### Objectives:

To develop skills in advocating for a telehealth delivery program

### Guidelines (including links to article, source document)

During the session:

- Faculty will demonstrate and review the piece of equipment (10-15 minutes)
- Students will develop the “Shark Tank” presentation for use with case
- Your presentation will occur after lunch and be no more than 15 minutes to include:
  - Demonstration of Equipment
  - Develop and Utilize PowerPoint that has been developed for presentation in order to pitch your telehealth delivery program
  - Questions
- You will be competing to get the money to start your business

**Case:** You have been contacted to provide a telehealth device to the hospital/clinic that will allow for post-op follow-up. The goal is to make sure patient is recovering well and to decrease recidivism to the hospital due to complications. The patient is the same patient that you had this AM. She has the history of substance abuse and has been on Suboxone. She also has history of Congestive Heart Failure. She had knee replacement surgery. Think about complications that might need to be evaluated. Also, think about post-op discharge instructions and follow-up. What do you need to assess?
